

Capax Standard Duplicator

Introducing the high powered Standard DVD and CD Duplicator from Capax Technology, Australia's leading supplier of media duplication products.

The Capax Standard Duplicator is not only the most advanced duplicator on the Australian market, it's also extremely simple to use. With the ability to copy all disc formats including -R, +R and DL, it's the perfect solution for all your duplication needs.

Suitable for both small or large business needs.

Capax duplicators are locally assembled with components sourced from leading US manufacturers including burners from Sony Optiarc or LG.

These same components can also be found under the US Xerox Duplicators brand so you know you are buying a pedigree product.

All duplicators are backed by a 12 month return to base warranty on parts and labour.

We also provide a swap over guarantee if the product fails within the first 14 days.

AutoCopy

Use a single button press on the control panel for minimal operation. Burning starts automatically once discs are loaded and eject when completed.

Load and Copy

In this mode, the duplicator will create a hard disk copy first, before burning. This increases burn reliability plus a faster throughput. This is a single button operation and requires the optional 500GB hard disk.

Account Management

32 usernames to protect against unauthorised use.

Maximum burn

Burning at the wrong speed can often produce a high number of failures.

Max Burn takes the guess work out as the duplicator will calculate the optimum burn rate for the best results.

Large memory

More memory means better performance and the duplicator is fitted with up to 256MB on 15 target.

Throughput

Number of burners	7	11	15
Discs per hour - 350 MB CD 48x	168	264	360
Discs per hour - 2.5 GB DVD 16x	84	132	180

Available with 7, 11 or 15 targets. (7 and 11 target pictured)

Other models and options

Blu-ray Bridge

Unique to Capax, you can add one or more Blu-ray burners when you purchase, or upgrade later. Rather than build a whole tower, this is the most cost effective way to meet new standards at a pace that suits your budget.

500GB Hard Disk

Produce more reliable and faster copying plus have a storage for repeat titles. Access over 100 DVD or over 700 CD masters through the simple to use control panel.

Copy Protect / Copy Lock

When you have the need to protect DVD content against unauthorised reproduction, the Copy Protect duplicator provides a simple and very cost effective solution.

The supplied Copy Lock PC software encrypts the DVD master against direct copy and ripping.

Copy Connect

Connect via USB to a PC and transfer burn ready files directly to the duplicator. This saves time and reduces the errors caused if you create a poor disc master.

LightScribe

With LightScribe, you don't need a printer as the label is created using the duplicator itself. A very unique finish.

Daisy Chain

The Daisy Chain models can be linked together to form one continuous burning station with thousands of trays.
